# Focus Areas

TELECOM  
&  
FUTURE  
INTERNET

SMART  
CITIES

# Overview

## Research

H2020

14 new projects until 2020

PT2020

Together with H2020, ensure 50% of total costs

## Products

Research results integrated into commercial solutions

Remember the focus areas? #telco #smartcities

# Current status (H2020)

## #telco

SHIELD

### 5G-PPP Phase 1

SONATA

SELFNET

### 5G-PPP Phase 2

5GCity

# COMMERCIAL SOLUTIONS

---

bike  
emotion®

*Bike Sharing Technology*

# Success Story - Birmingham (Alabama, US)

# citibrain:

ubiwhere  
SUITING THE FUTURE

*“Smart solutions for global challenges”*

Commercial joint venture with three Portuguese SMEs:

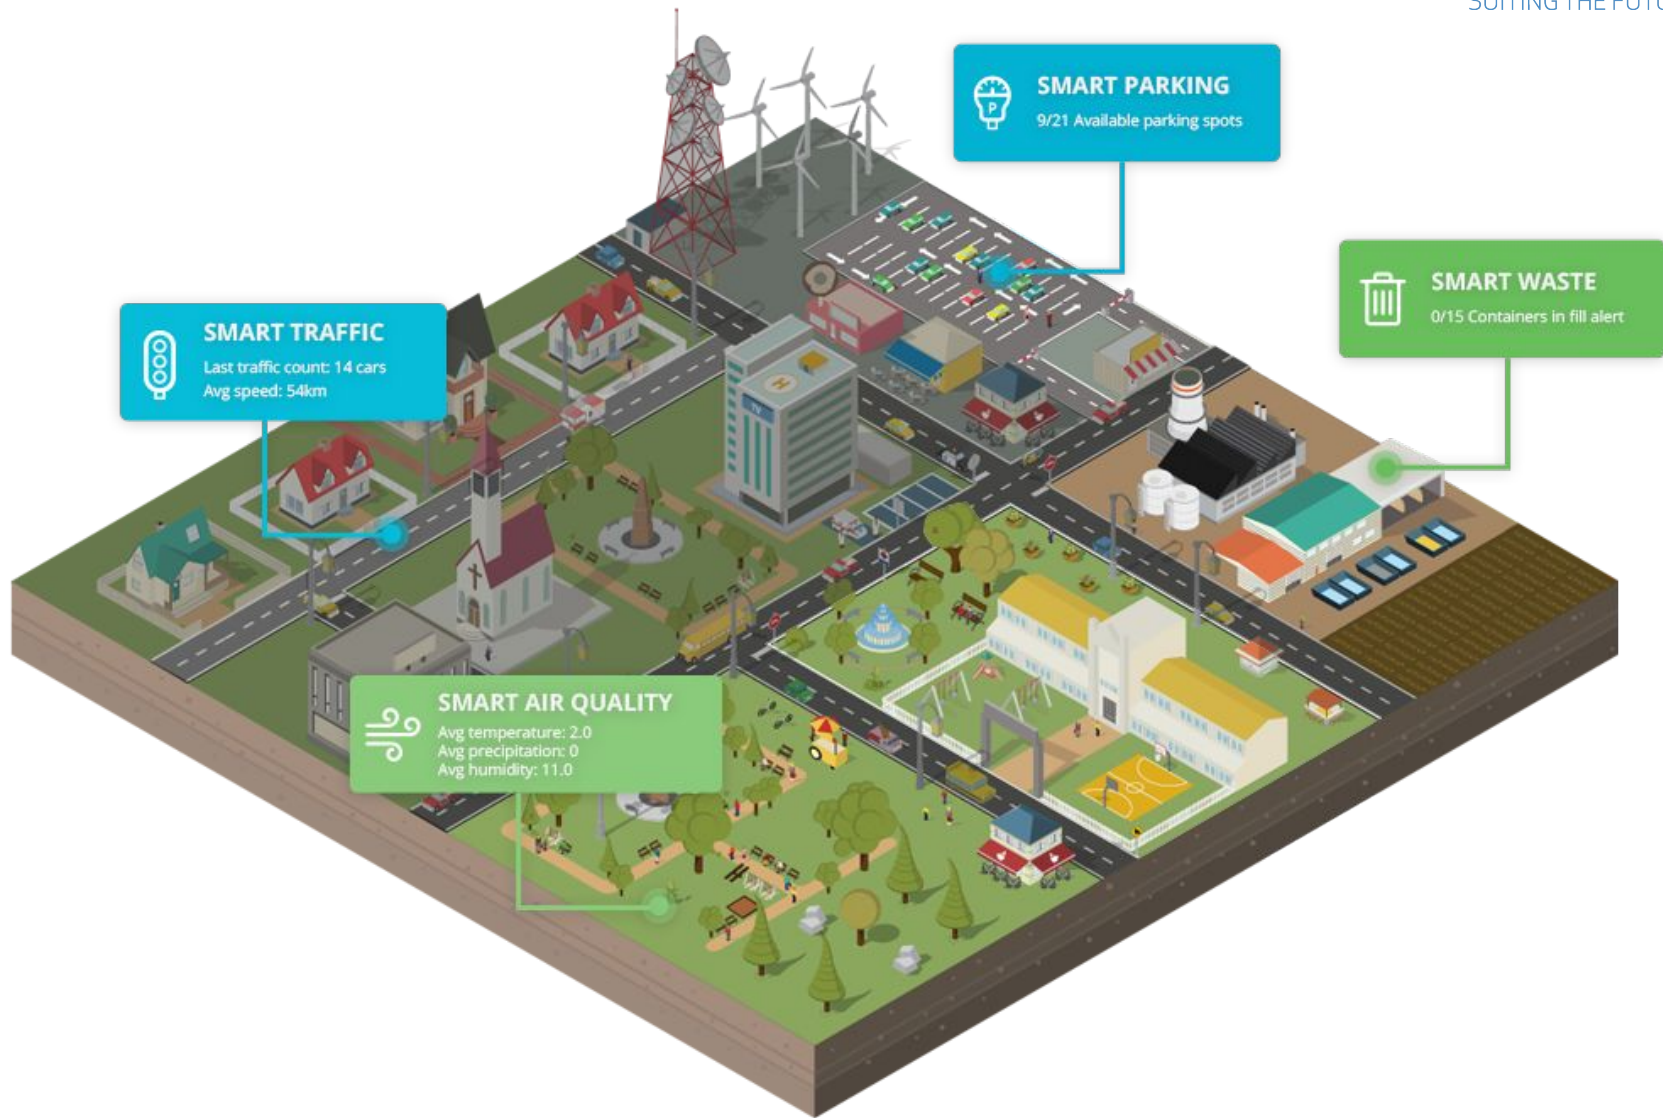

**Micro I/O** (Electronics)

**Ubiwhere** (Software)

**Wavcom** (Low-Power Networks)

Focus on Mobility and Environment

**SMART TRAFFIC**  
Last traffic count: 14 cars  
Avg speed: 54km

**SMART PARKING**  
9/21 Available parking spots

**SMART AIR QUALITY**  
Avg temperature: 2.0  
Avg precipitation: 0  
Avg humidity: 11.0

**SMART WASTE**  
0/15 Containers in fill alert

The logo features a stylized 'P' composed of three concentric circles with a vertical line through the center, positioned between the words 'smart' and 'tampost'.

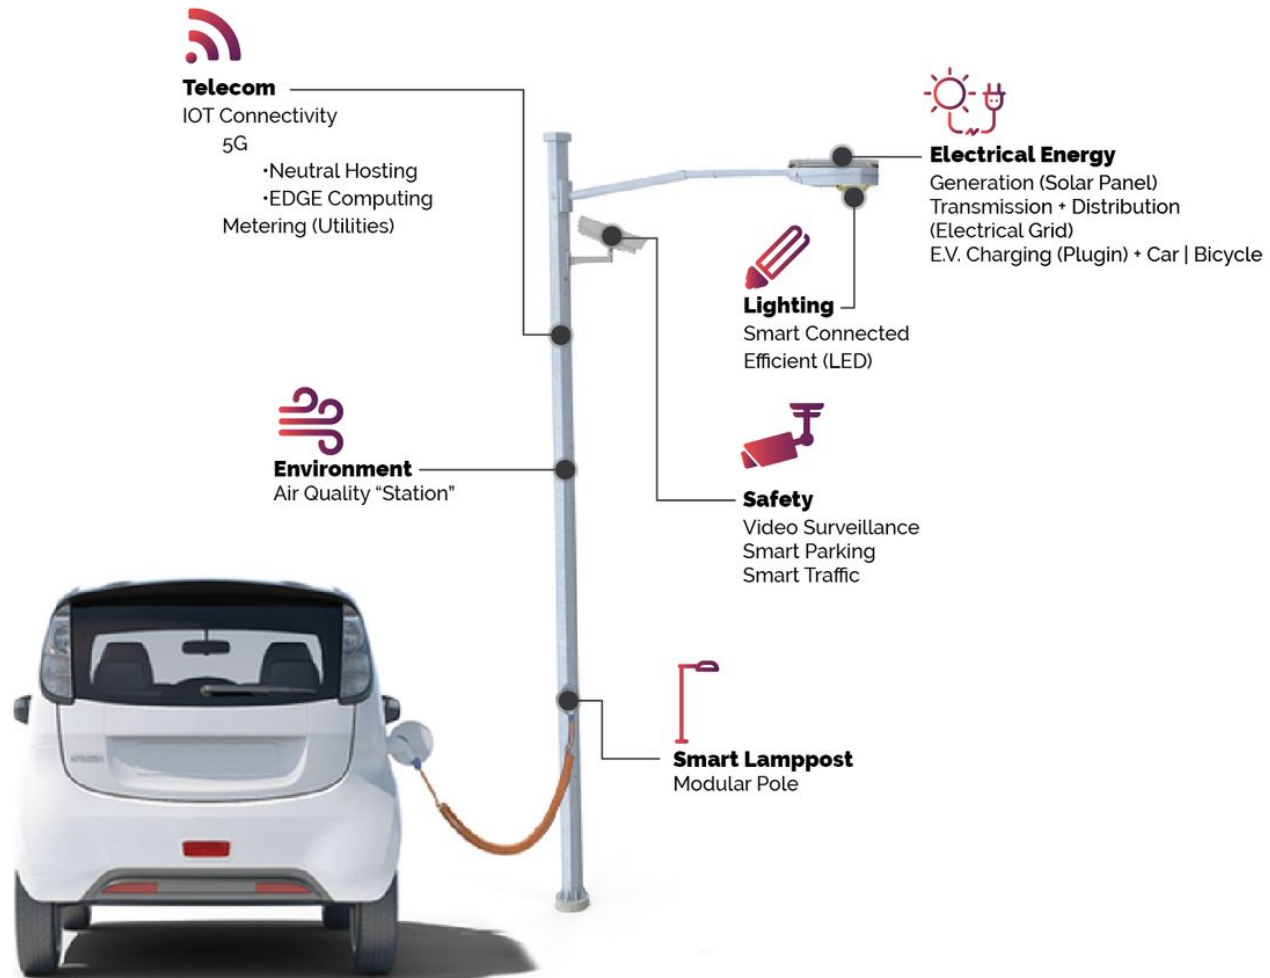

smartampost

# Smart Lamppost - Consortium

**ubiwhere**  
SUITING THE FUTURE

# Smart Lamppost - Modular Concept

# Smart Lamppost - From concept ...

**ubiwhere**  
SUITING THE FUTURE

# Smart Lamppost - ... to production

Will be demoed during upcoming SCEWC @ Barcelona

---

# FUTURE INTERNET

---

# Smart Lamppost - 5G Enabler

## How to achieve 5G KPIs?

1000 times higher mobile data volume per geographical area

10 times to 100 times higher typical user data rate

10 to 100 times more connected devices

10 times lower energy consumption

End-to-End latency of < 1ms

Ubiquitous 5G access including in low density areas (small cell capillarity)

## Innovation Pillars

Edge / Fog Computing (MEC) + NFV & SDN (DevOps model)

Small Cell massive rollout + mmWave

Neutral hosting

## Business Opportunity for such demanding market

Disruptive technology demands an equally disruptive business model

# Smart Lamppost - NFV & SDN

---

## Network

4G & 5G (Small Cell)

---

WiFi

---

## Neutral Hosting

Subscription Business Model

---

Multi-tenant solution (autonomic network slicing deployment)

---

CAPEX & OPEX reduction (re-use existing infrastructure)

---

Monitor KPIs and SLAs

---

# Smart Lamppost - MEC

## Innovation Enabler

- Real-time access to Radio Network Information (radio-aware)
- Applications running closer to the UE
- Low latency communication
- Smarter applications
- High throughput

## Edge Cloud

- MEC applications compliant with Open Standards (ETSI MEC / M-CORD)
- ARM SBCs managed by OpenStack (Edge VIM)

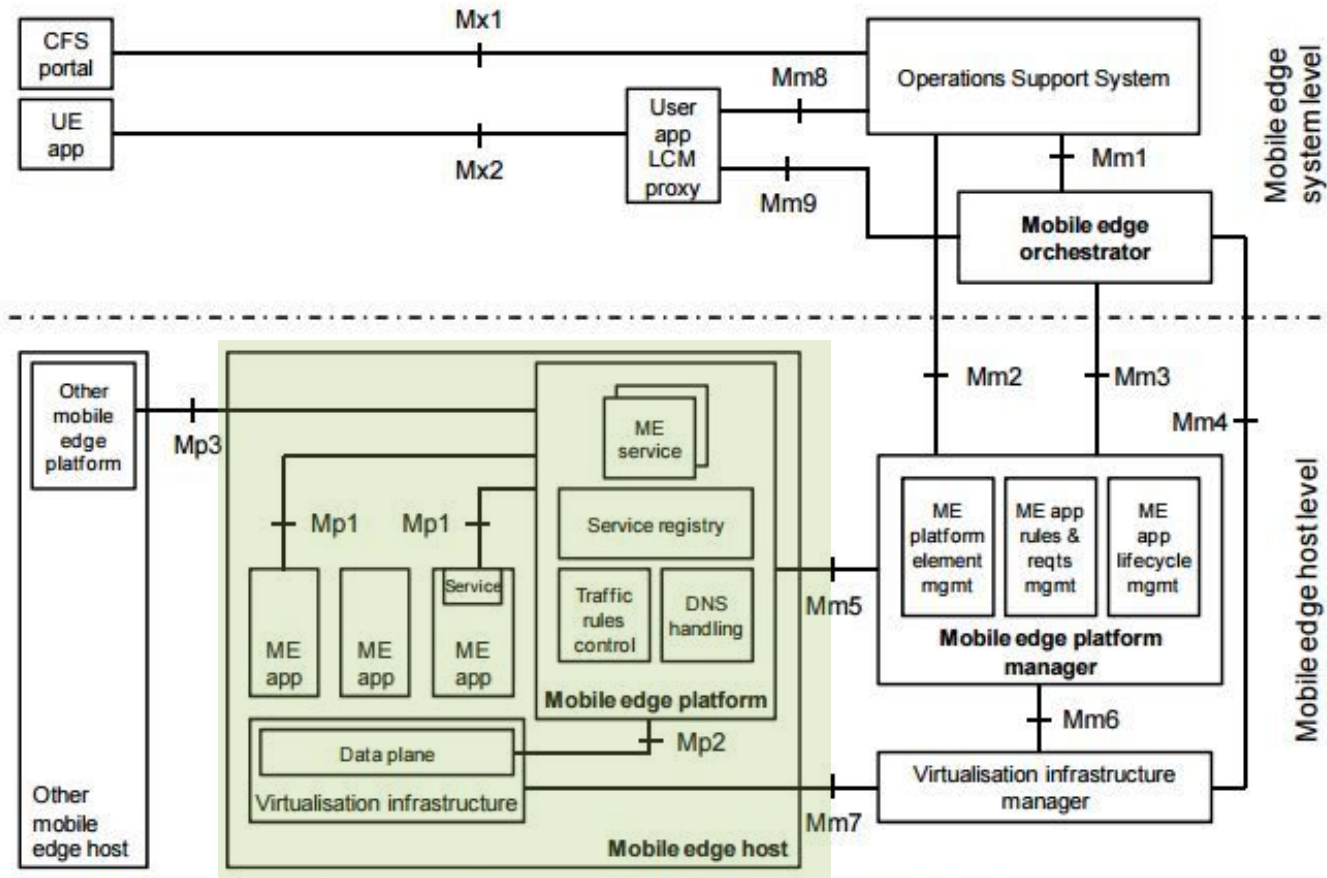

### **Telco Operators:**

- Leverage lamppost's Edge Computing Capabilities
- Deploy special applications closer to their client's UE

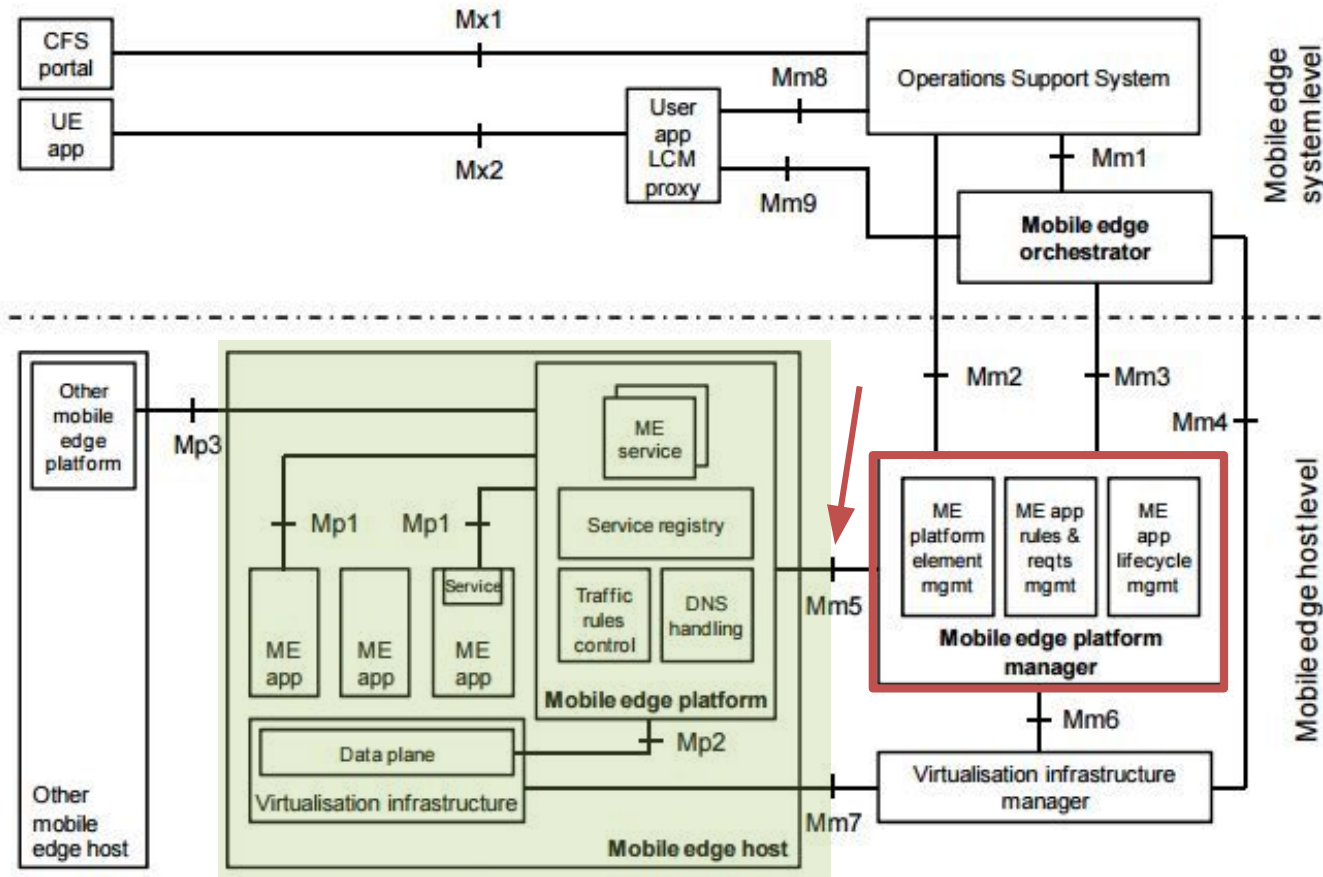

### **General Clients:**

- PaaS to run Linux Containers / Unikernels on available resources
- Serverless architecture

# Smart Lamppost - ETSI MEC

# Smart Lamppost - ETSI MEC

---

CCAM:  
Cooperative, Connected  
and Automated Mobility

---

# CCAM: New name for V2X / C-ITS

# CCAM - It is happening ...

## NHTSA (National Highway Traffic System Administration, USA)

Moving forward with the 2014 proposed rulemaking (April 2017)  
All vehicles required to talk to each other by 2023

## Qualcomm

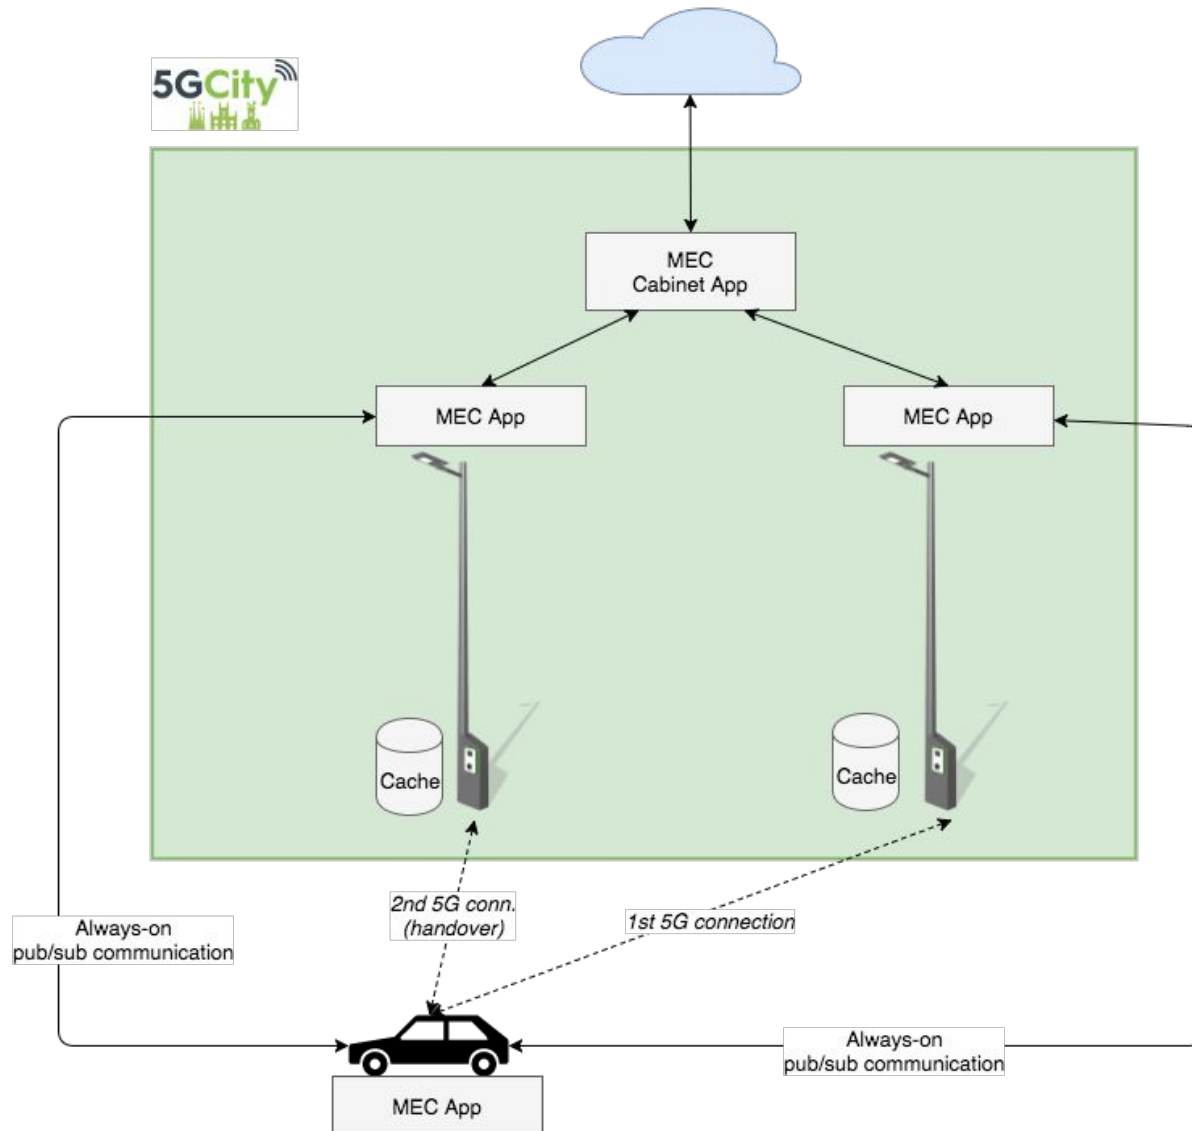

Released 9150 C-V2X chipset (1 month ago)  
Intelligent Transportation Systems (ITS) V2X stack

## NVIDIA

Released Drive PX “Pegasus” (2 weeks ago)  
Dedicated hardware with “datacenter-class processing power”, for autonomous cars

**How can we derive value from all this intelligence + communication capabilities?**  
**What sort of network architecture is needed to leverage and coordinate all of this?**

# Smart Lamppost - 5GCITY CCAM Use Case

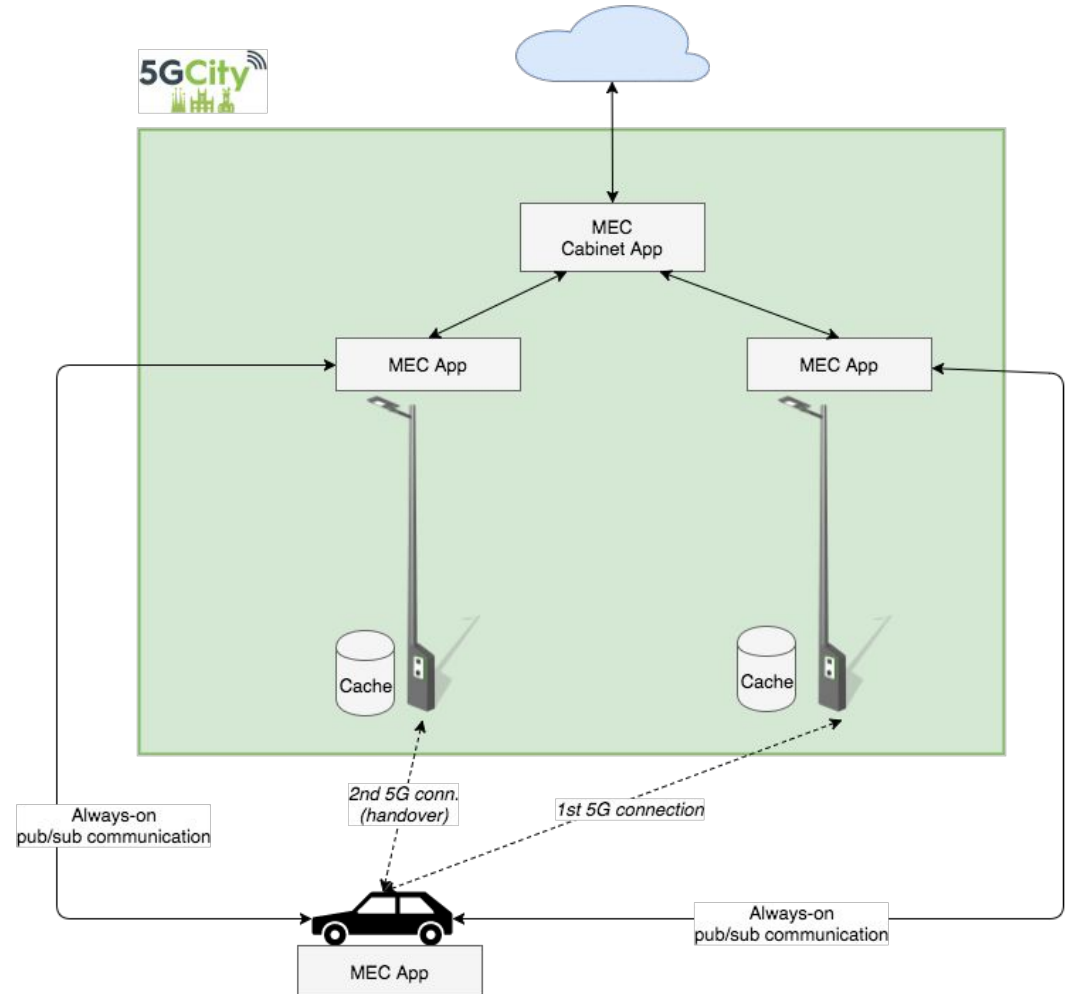

# Smart Lamppost - 5GCITY CCAM Use Case

## Deployed in

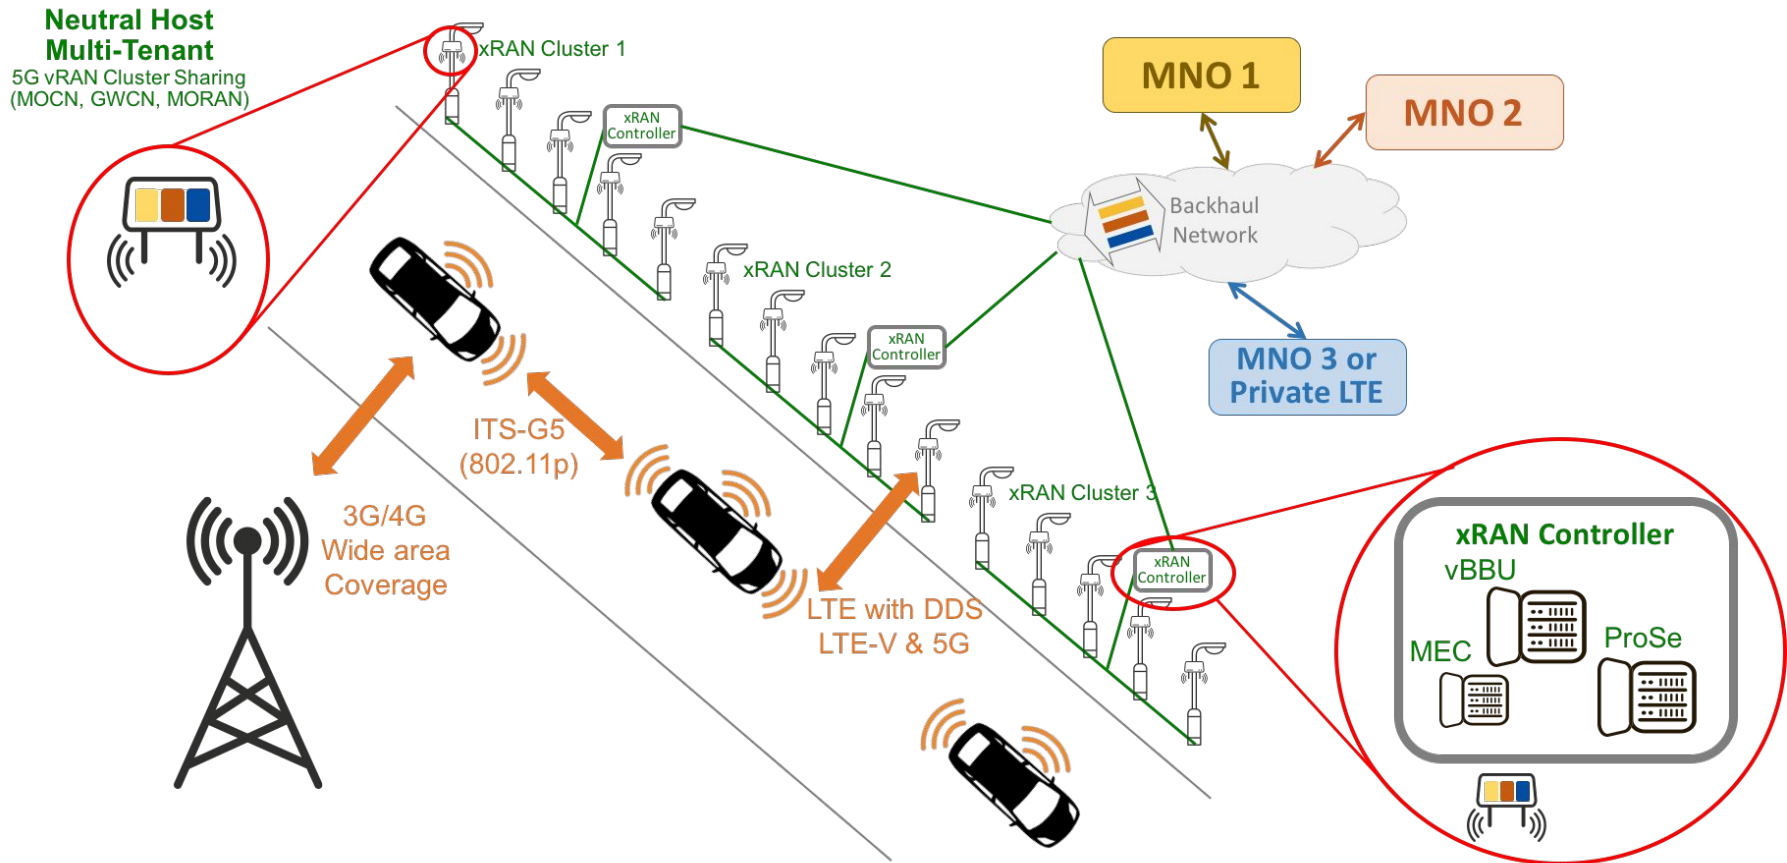

- Bristol
- Barcelona

## Coordination mostly with

- Accelleran
- Adlink & PrismTech
- NEC
- Nissan

# Smart Lamppost - 5GCITY CCAM Use Case

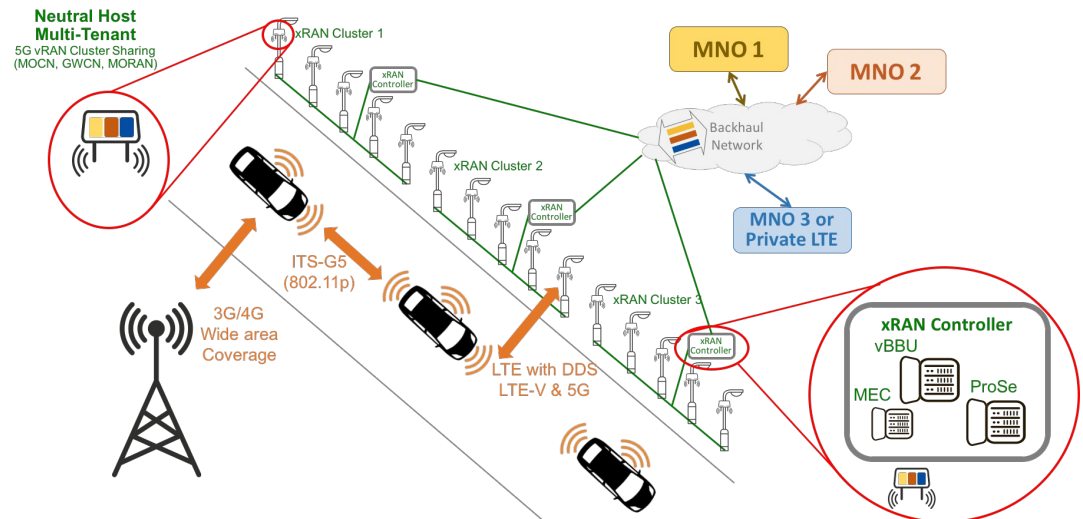

# Smart Lamppost - 5GCITY CCAM Use Case

## 5G

- V2N
- Enable uLLRC between *Vehicle and Network*
- Leverage Cloud connectivity and MEC coordination
- Leverage NFV for network slicing with guaranteed QoS

## ITS-G5 / 802.11p / DSRC

- Appropriate for V2V (NLOS)
- Enable uLLRC *between Vehicles only*
  - LTE Direct? (Qualcomm)
- Cooperation as envisioned by European Commission (*5G For Europe: An Action Plan*)

# Smart Lamppost - 5G CCAM Challenges

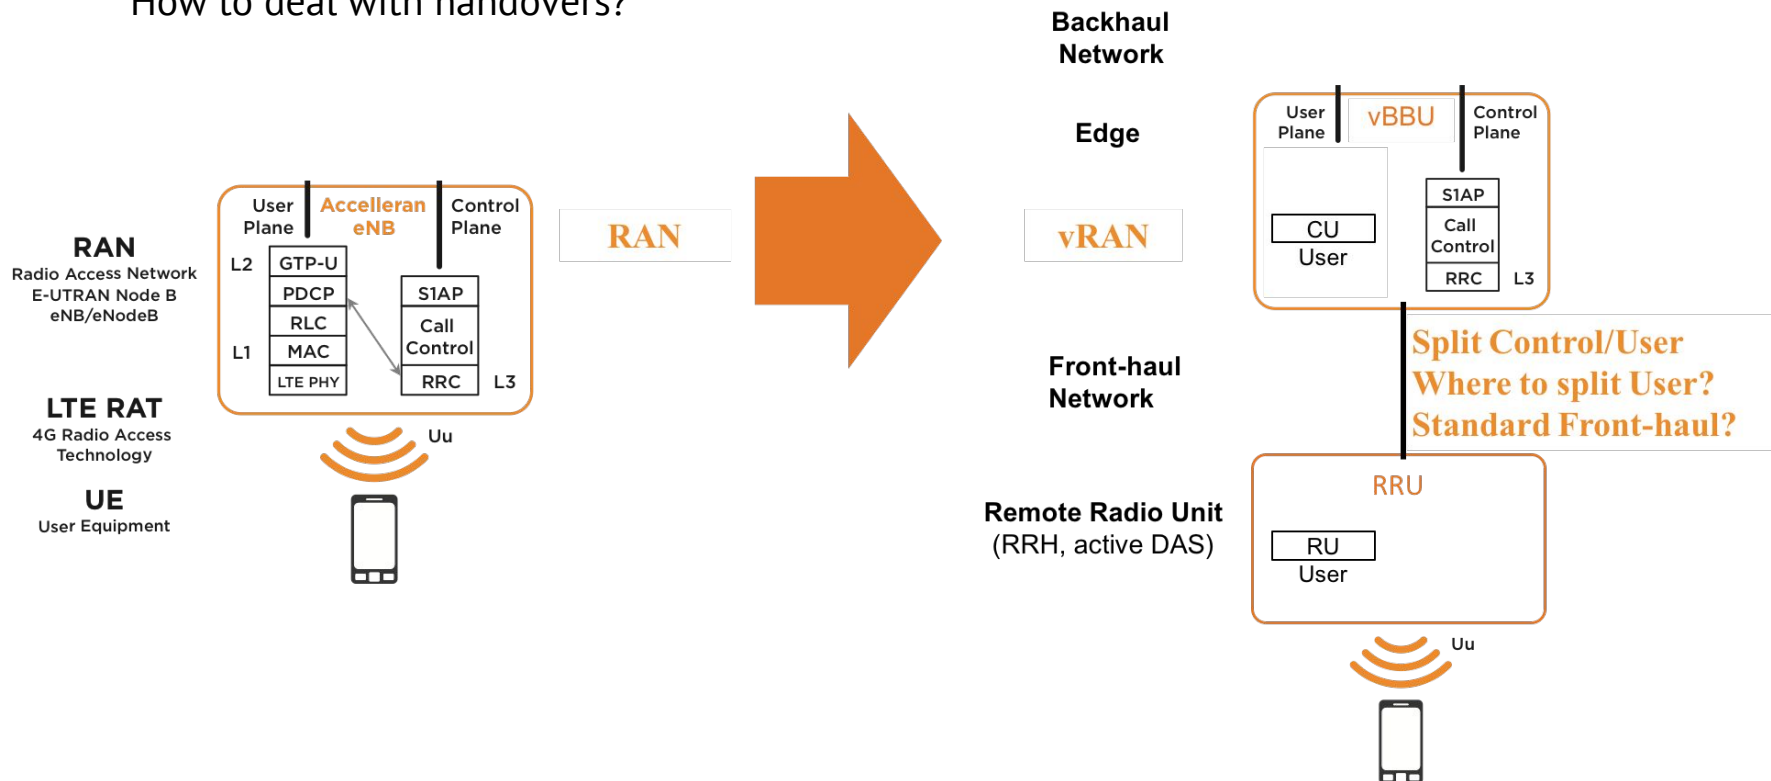

## 5G NFV: Disaggregating the RAN

Standard RAN architecture might not suffice

Flexible solutions (software / virtualization) tailored to different verticals / UCs

How to maintain uLLRC with fast-moving mobile nodes?

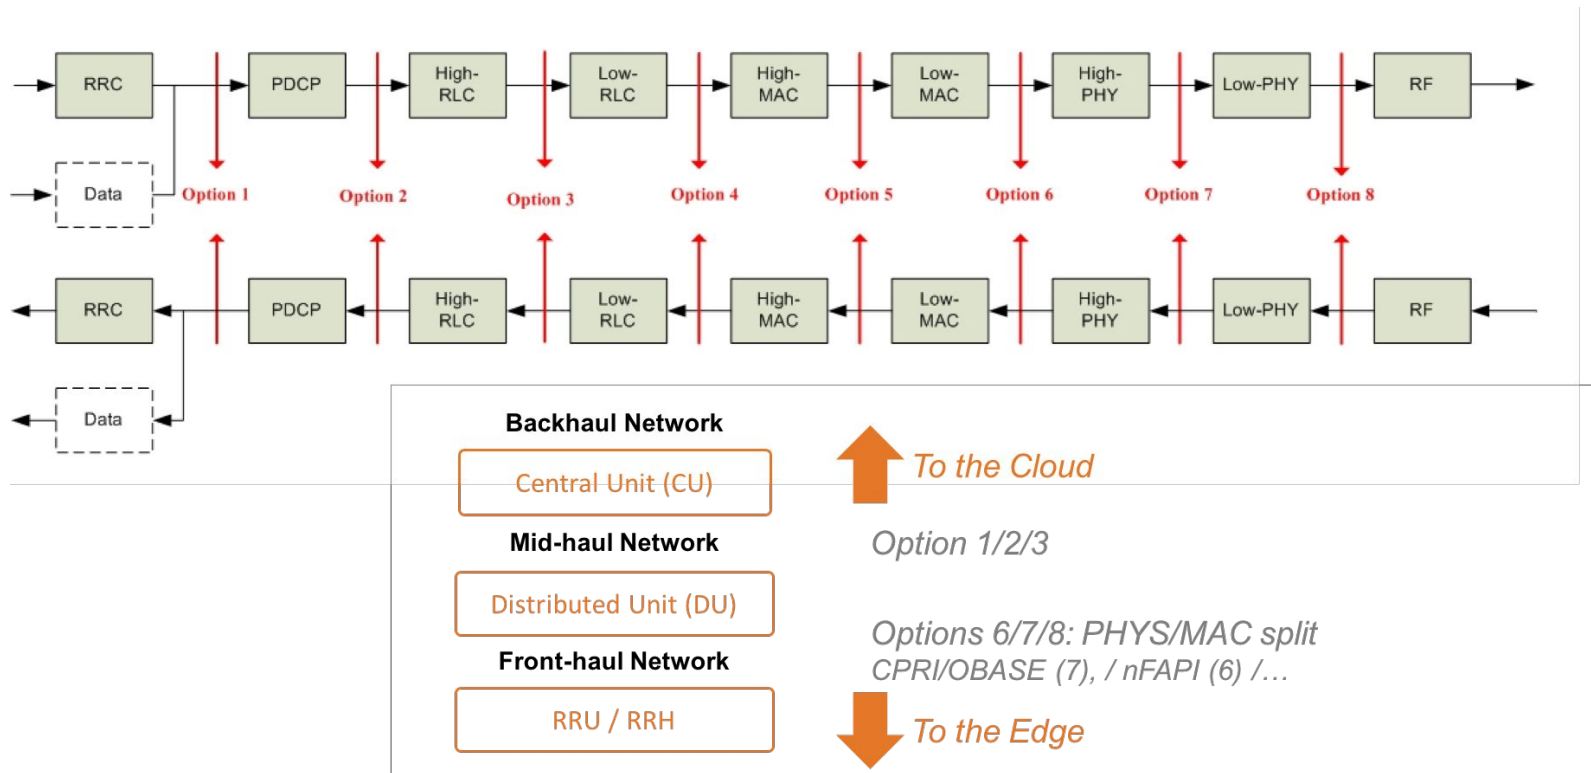

How to deal with handovers?

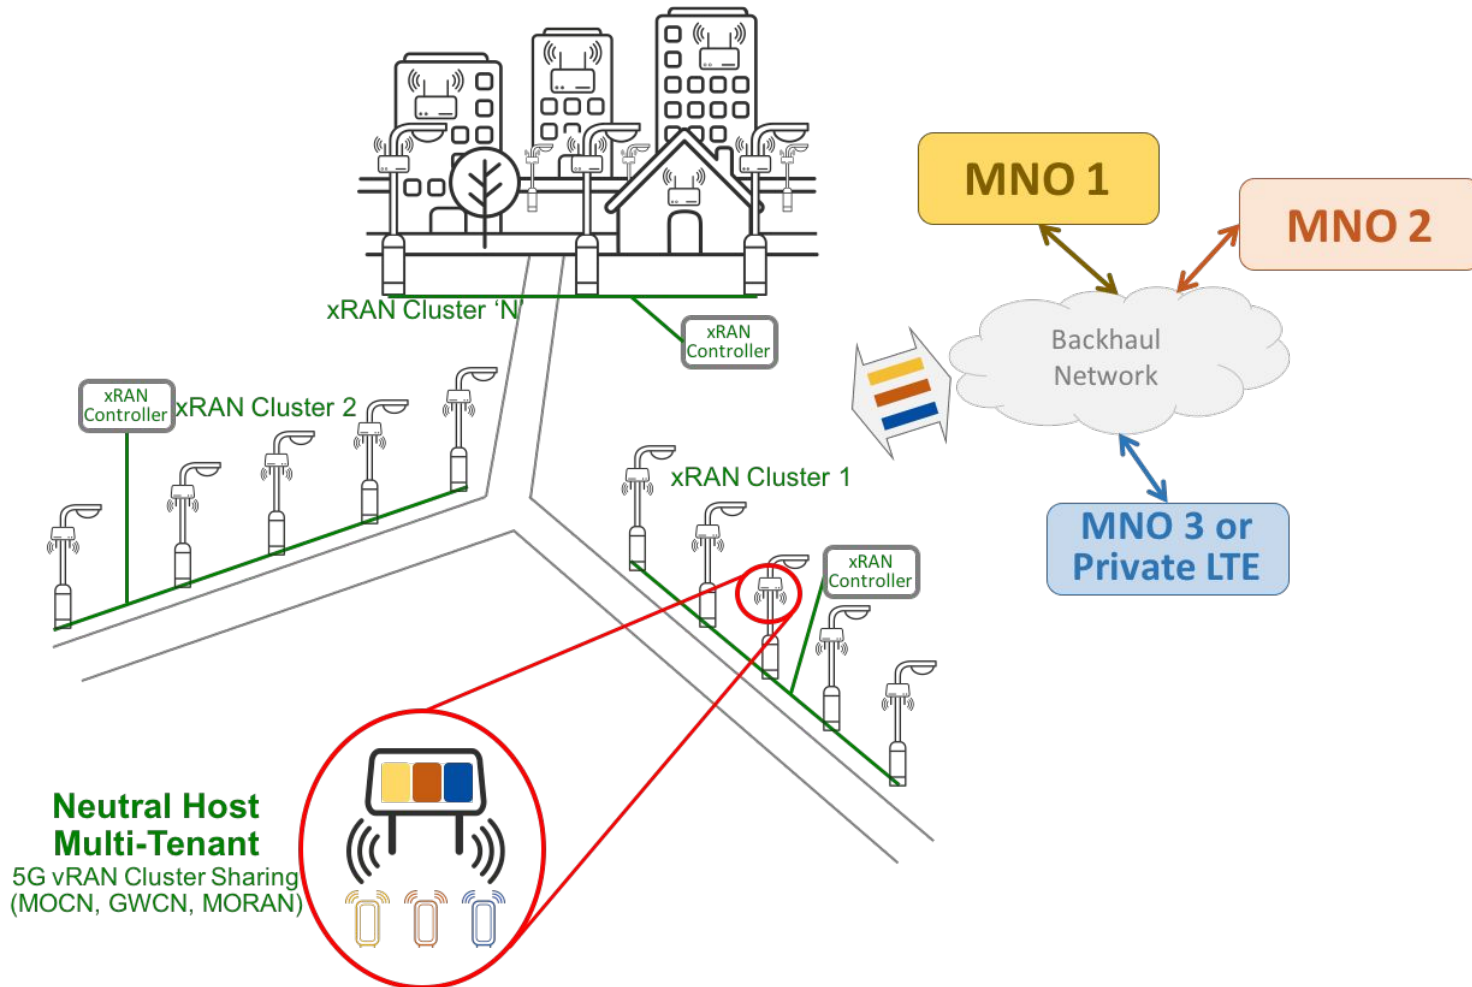

# Smart Lamppost - 5G CCAM Challenges

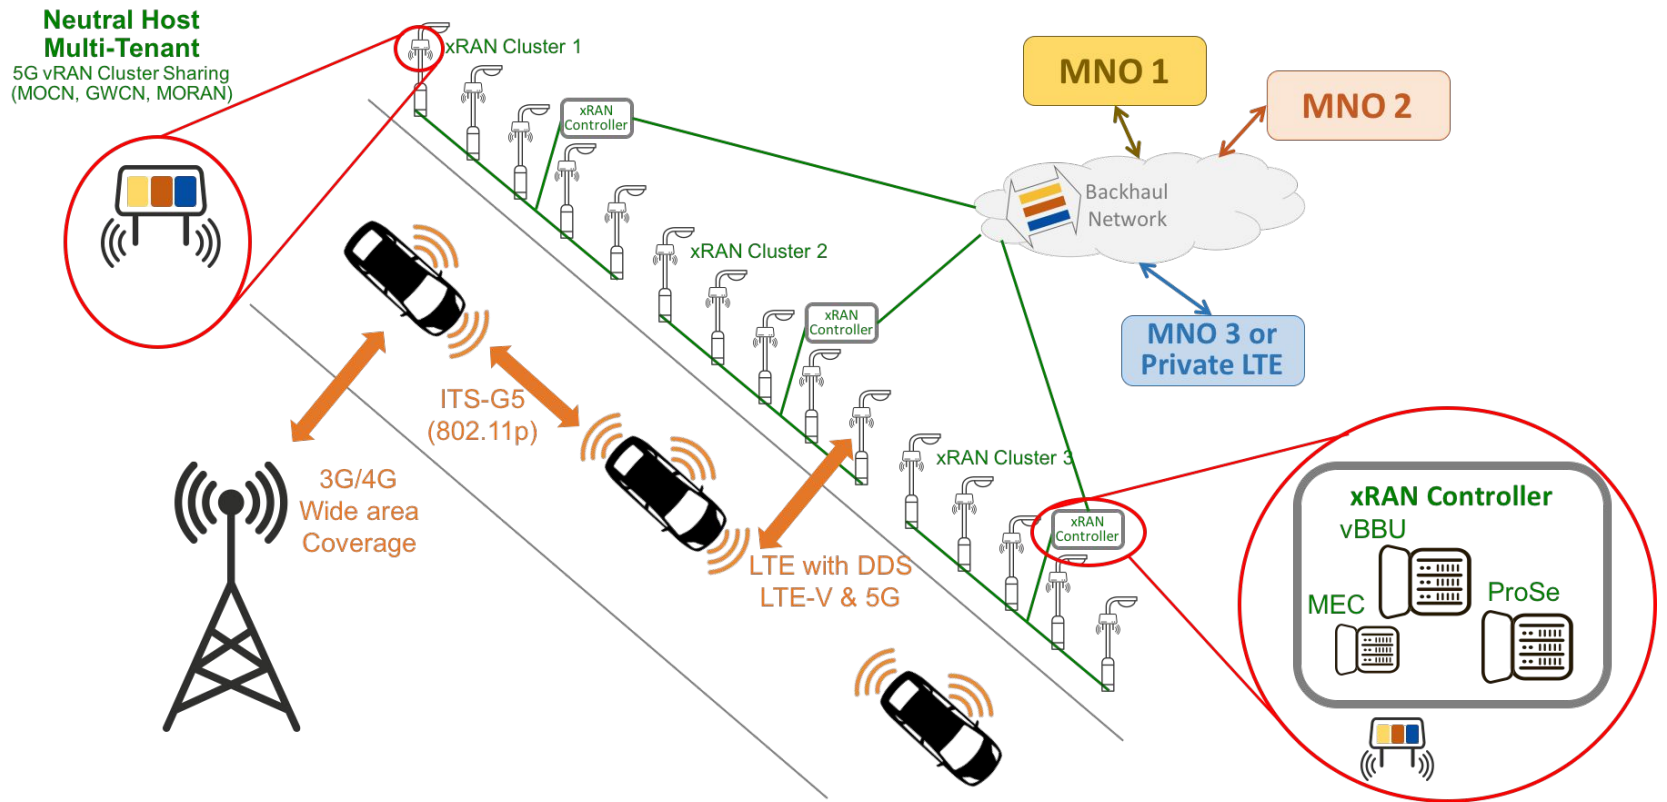

## 5G RAN Split Options

# Smart Lamppost - 5G CCAM Challenges

# Smart Lamppost - 5G CCAM Challenges

# Conclusions (?)

Awareness between Applications and Radio is key for innovative applications/services to emerge

Softer handovers / re-auth mechanisms

Virtualization & automation is key for Smarter RAN modules placement

Cabinet ? Lamppost ? Core ?

Can we focus on SW development to create a general framework which would allow for a smarter instantiation of VNFs, according to the specific UC, on a distributed infrastructure ?

Throughput ? Latency ? Packet loss ?

Good coordination between cellular (5G) and DSRC (802.11p) - SON ?

How to leverage massive small cell rollout?

Can we make use of Blockchain technology to transmit secure data in a trustworthy manner across this distributed edge infrastructure?

Can we program smart contracts on this network?

---

Thank you!

---
